

SE-900 Switcher PAL-NTSC Conversion

1. Remove the last card from the SE-900 base unit, Slot #15(Left hand side).
2. On the right side of the SD card, there are three vertical pins, two which are joined together by a “jumper”.
3. There are two different versions of the SE-900 Remote card. The picture on the left is a revision 1 of the card and the picture on the right is a revision 2 of the card.

If the unit is set to NTSC, then the two bottom pins will be joined by the jumper, leaving the third top pin by itself.

If the unit is set to PAL, then the two top pins will be joined by the jumper, leaving the third bottom pin by itself.
